BIOPROTECTOR

Basic Substance

Biorizon Biotech has its Integrated Management system certified according to the standards: ISO 9001, ISO 014001 and ISO 166002

Preventive and Palliative Action of Fungal Diseases

SupraProtect

FACTORS TO CONSIDER IN THE APPLICATION OF

Supra Protect is a solid serum with fungicidal action against powdery molds according to SANTE/12.354/2015. The basic substance of Supra Protect can combat and prevent all kinds of fungal diseases.

INSTRUCTIONS FOR USE

Product for foliar application exclusively in field crops and greenhouse.

Supra Protect is a product that acts by contact, so it is recommended to wet the entire plant well.

It does not leave residues or has a safety deadline.

Supra Protect should not be mixed with strong acid or basic reaction products.

Only the results of mixtures made with products manufactured by Biorizon Biotech are guaranteed, otherwise, it is recommended to carry out a small compatibility test that guarantees the correct dispersion of the product in water, thus avoiding decreasing its effectiveness.

Store in original container at 5-40 °C.

Use the product with adequate protection.

Once opened it is recommended to use as soon as possible and avoid overexposure to moisture.

It is recommended to keep out of reach of children and not to eat, drink or smoke during use, as well as to avoid its release into the aquatic environment outside the intended use of the product.

It is mandatory to handle the product by taking the precautions and warnings stated in the safety data sheet.

DOSE

2 ■ 4 Kg / Ha and 3 to 5 applications every 7 days, for the treatment of:
